As you'll see in the video above, the app has a super streamlined and easy to understand design that walks you through the entire task of scanning for malware and, in the event something is discovered, quarantining and properly and safely dealing with the threat.. If it detects something, Malwarebytes will prompt you to confirm "quarantining" the threat.. That's why it's easy to give a recommendation on the as a go-to option for protecting your Mac.

Malwarebytes actually protects your Mac against much more than just malware Adware and junk software often referred to as PUPs, or potentially unwanted programs, have been an increasing problem for Mac users.. If you choose to turn on real-time protection rather than performing manual scans, you will automatically get a notification when Malwarebytes detects and quarantines a threat or has an update to protect against the latest security discoveries (as pictured below): It truly couldn't be any easier to keep your Mac protected from these threats and have peace of mind.. Within you have options to either turn on real-time protection to have the app actively scanning for incoming threats, or to perform a scan manually on your system.. " In here you'll be able to view all of the potential threats that the app finds to either review and further research them and/or ultimately delete them from your system permanently.. We currently has this deployed to all college-owned Macs Endpoint Protection? Darrin Ben Toms 7/11/2012, 13:08 и.
